## **ABSTRACT**

A medicament for preventive and/or therapeutic treatment of a microbial infection which comprises as an active ingredient a compound represented by the following general formula (I):

$$\begin{array}{c|c}
R^1 \\
R^2 \\
S \\
W^1 \\
N \\
N \\
N \\
W^2 - Q
\end{array}$$

wherein, R¹ and R² represent hydrogen atom, a halogen atom, hydroxyl group or the like, W¹ represents -CH=CH-, -CH2O-, -CH2CH2- or the like; R³ represents hydrogen atom, a halogen atom, hydroxyl group or an amino group; R⁴ represents hydrogen atom, a group of -OZ0-4R⁵ (Z0-4 represents an alkylene group, a fluorine-substituted alkylene group or a single bond, and R⁵ represents a cyclic alkyl group, an aryl group or the like); W² represents a single bond or -C(R⁵)=C(Rց)- (R³ and Rg represent hydrogen atom, a halogen atom, a lower alkyl group or the like, Q represents an acidic group, but W² and Q may together form vinylidenethiazolidinedione or an equivalent heterocyclic ring; m and n represent an integer of 0 to 2, and q represents an integer of 0 to 3.
